Decoding

- Given a pretrained LM and a prefix, how do we generate the most probable continuation (or *any* probable continuation) of that prefix?

- More concretely, how do we find

$$\arg \max \prod_i^L p(w_i | w_1, w_2, \dots, w_{i-1}, \text{prefix})$$

- Can we enumerate all possible generations given the prefix and then choose the one with the highest probability?

easiest option: **greedy decoding**

Beam search

- in greedy decoding, we cannot go back and revise previous decisions!
 - *les pauvres sont démunis (the poor don't have any money)*
 - → *the _____*
 - → *the poor _____*
 - → *the poor **are** _____*
- fundamental idea of beam search: explore several different hypotheses instead of just a single one
 - keep track of k most probable partial translations at each decoder step instead of just one!

the beam size k is usually 5-10

Beam search decoding: example

Beam size = 2

Beam search decoding: example

Beam size = 2

Beam search decoding: example

Beam size = 2

Beam search decoding: example

Beam size = 2

and so on...

Beam search decoding: example

Beam size = 2

Beam search decoding: example

Beam size = 2

Beam search decoding: example

Beam size = 2

Does beam search always return the most probable continuation of the prefix?

What are the termination conditions of beam search?

What's the effect of changing beam size k ?

- Small k has similar problems to greedy decoding ($k=1$)
 - Ungrammatical, unnatural, nonsensical, incorrect
- Larger k means you consider more hypotheses
 - Increasing k reduces some of the problems above
 - Larger k is more computationally expensive
 - But increasing k can introduce other problems:
 - For NMT, increasing k too much decreases BLEU score (Tu et al, Koehn et al). This is primarily because large- k beam search produces too-short translations (even with score normalization!)
 - In open-ended tasks like chit-chat dialogue, large k can make output more generic (see next slide)

Effect of beam size in chitchat dialogue

Human
chit-chat
partner

Beam size	Model response
1	<i>I love to eat healthy and eat healthy</i>
2	<i>That is a good thing to have</i>
3	<i>I am a nurse so I do not eat raw food</i>
4	<i>I am a nurse so I am a nurse</i>
5	<i>Do you have any hobbies?</i>
6	<i>What do you do for a living?</i>
7	<i>What do you do for a living?</i>
8	<i>What do you do for a living?</i>

Low beam size:
More on-topic but
nonsensical;
bad English

High beam size:
Converges to safe,
“correct” response,
but it’s generic and
less relevant

Sampling-based decoding

Both of these are **more efficient** than beam search
– no multiple hypotheses

- Pure sampling
 - On each step t , **randomly sample** from the probability distribution P_t to obtain your next word.
 - Like greedy decoding, but sample instead of argmax.
- Top-n sampling*
 - On each step t , randomly sample from P_t , **restricted to just the top-n most probable words**
 - Like pure sampling, but truncate the probability distribution
 - $n=1$ is greedy search, $n=V$ is pure sampling
 - Increase n to get more **diverse/risky** output
 - Decrease n to get more **generic/safe** output

*Usually called top- k sampling, but here we're avoiding confusion with beam size k

There has been an unprecedented number of calves caught in the nets of whaling stations that operate in WA. Pilot whales continue to migrate to feeding grounds to feed their calves. They are now vulnerable due to the decline of wild populations; they are restricted to one breeding site each year. Image copyright Yoon Bo Kim But, with sharp decline in wild populations the size of the Petrels are shrinking and dwindling population means there will only be room for a few new fowl.

Decoding algorithms: in summary

- Greedy decoding is a simple method; gives low quality output
- Beam search (especially with high beam size) searches for high-probability output
 - Delivers better quality than greedy, but if beam size is too high, can return high-probability but unsuitable output (e.g. generic, short)
- Sampling methods are a way to get more diversity and randomness
 - Good for open-ended / creative generation (poetry, stories)
 - Top-n sampling allows you to control diversity

The famous 🦄 discovered by GPT2-XL

Input: In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains.

Generation (10x top-k sampling tries): The scientist named the population, after their distinctive horn, Ovid's Unicorn. These four-horned, silver-white unicorns were previously unknown to science. Now, after almost two centuries, the mystery of what sparked this odd phenomenon is finally solved. Dr. Jorge Pérez, an evolutionary biologist from the University of La Paz, and several companions, were exploring the Andes Mountains when they found a small valley, with no other animals or humans. Pérez noticed that the valley had what appeared to be a natural fountain, surrounded by two peaks of rock and silver snow. Pérez and the others then ventured further into the valley. "By the time we reached the top of one peak, the water looked blue, with some crystals on top," said Pérez. Pérez and his friends were astonished to see the unicorn herd. These creatures could be seen from the air without having to move too much to see them – they were so close they could touch their horns. While examining these bizarre creatures the scientists discovered that the creatures also spoke some fairly regular English.....

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English. The story goes that the British inquisition had a group of escapees who were fleeing England and hid out in the mountains. Rather than be captured and returned, they gave up their British accents and now talk like this.

The U.S. Government keeps most of this data secret, to the point that IRS records are exempt from Freedom of Information Act requests. Other unknown and non-random data is managed by government agencies and personal data such as your Social Security number (SSN) is collected by government and private entities with no means of opting out. Being in the U.S., your private data is used to calculate your taxes, determine eligibility for benefits such as health.

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English.

The three field scientists were considering sending back a damage report when they were confronted by a curious scene. In a science journal article, first author Morgan N. Jones noted, "We are very excited to have found the unicorn herd, but we had not expected to find them in such great numbers or to have gathered together an immensely intelligent species that lived alongside us."

Since the encounter, the forest has remained an icon for the biodiversity within it and for the grave tragedies that have affected it.

But in the 1990s and early 2000s , the Colombian government became infiltrated by paramilitaries. The rise in paramilitary activity allowed armed groups to enter and exploit the resources of the forest. These activities took their toll on the ecosystem, the biodiversity and on the indigenous ethnic groups who live there.

Dianne Carroll, an ethnobotanist with the National Autonomous University of Mexico , has criticized the destruction of the forest. According to her article, it was engineered by logging and "often aimed at the fabulous and valuable trees for which commercial value determines international trade."

Corporate loggers have depleted rare species of hardwood timber trees and indiscriminately cleared previously healthy hillsides of trees yielding valuable mahogany, Afrom

GPT3 170B

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English. In the ensuing conversation, one of the unicorns, a young female, gave a long speech about the history of her people. Afterward, the researchers were sworn to secrecy, but the young unicorn's speech was leaked to the press. The speech, below, is as follows:

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English.

"I couldn't believe it when I heard it," one researcher said. "I was sure it was just some pranks being played on us."

Dr. Peter Richter told reporters that, "When we first saw them, we immediately recognized them as unicorns. Not only because of their appearance, but also the fact that they were literally prancing around a field of daisies and frolicking in the sky. They were literally dancing in the sky, the most common of all the mythical unicorn behaviours. We were flabbergasted."

Another researcher, Dr. Petra S. Marchesche said, "To our surprise, and elation, the unicorns could also speak perfect English."

"Not only that," Marchesche continued, "but they had this silly tradition of greeting each other by reciting pi, the most useless and arbitrary number ever invented."

The team later asked the unicorns to lead them to their home. One of the unicorns took them on a wild ride up and down mountains and valleys.

"I can't remember ever feeling so sick," one researcher said. "We were flying, literally flying, and falling, sometimes at the same time. We were literally like we were falling, literally flying and falling at the

so low I could jump over them. The water was literally blue, but I could tell that it was, in fact, green."

mountains were the ones that were actually blue.

was the fact that the unicorns spoke perfect English.

While the unicorns were not hostile towards the scientists at first, in a shocking turn of events, the lead scientist was shot and killed, when he attempted to take a sample of the unicorns' blood.

Scientists are looking into the possibility that they may have tampered with nature.

They believe that by introducing the legend of the unicorn, they may have created an actual unicorn that might later hurt others if they are not hunted.

To: Uncle Slayton

(I added "in the Andes Mountains" because there is no Andes Mountain in Antarctica.)

These should have been interesting. Alas, I could not go. "But I have already put a deposit down on a house...."

Yeah, but the good news is that when it inevitably takes out the nuclear reactors, New York will be buried in a 2 mile deep glacier! Habab

To: hchutch

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English. **Three of the animals were captured for posterity.**

In a book that is sure to make waves far beyond the scientific community, the scientists present their results: "It appears that unknown to the rest of humanity, unicorns evolved from genetically engineered squirrels rather than horses," writes Pablo de Miloslavsky, one of the research scientists. He goes on to report that back in 1955, a top-secret laboratory known as OSSEN performed some incredibly unusual genetic experiments.

Dr. Zoltan Zokofsky was attempting to transfigure mundane mammals into fleet-footed, heavy-horned animals suitable for mounting on battle chariots and carriages. They started with squirrels since they breed fast, but their main objective was unicorns because horse breeding and farm management in those days was haphazard at best. They grew up with unbridled imagination and too much wanderlust but, nevertheless, they fought in hand-to-hand combat with other recently created creatures: moose-kings, bear-gryphons and elk-angelotrons. Centaurs lost out because they tended to prance off and shoot people during battle (apparently procuring weed was a difficult task). Gorgons were problematic because they tended to get friendly and ravage each other (and also guests). Nothing worked with centaurs, gorgons and other miscellaneous fiends, as they all tended to be foul-tempered and uncouth. True, a couple unicorns held their ground but most of them could not shake their reputation for benignity. In the battle scenes, painted on the walls of various libraries, some unicorns had graces behind the chariots at crossroads (as backup singers), while others sat on stumps off to the side and recited Shakespearean sonnets or wrote opera librettos. They would still try to score a sidewise blow, but it was always with a gracefulness that was lacking in other beasts. Legend says that even after they fell over dead on battlefields they continued to frisk and stampede—albeit vertically.

Genetically engineered from squirrels, their brains were shrunken in size during microsurgery, and their innate cuteness overrode any natural survival instincts (besides breeding season), thus making them docile creatures known for the famous warm-and-fuzzy feeling they give women who sit around telling stories about animals as substitutes for real affection from men.

One great generation after 5-10 tries!

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English. "We were startled to hear a herd of well-spoken English-speaking unicorns!" exclaimed one of the researchers. When approached by the researchers, the unicorns claimed to be the fabled creatures of myth and legend.

According to the mythological unicorns, they are the descendants of a lost colony of shipwrecked Portuguese explorers. In the 16th century, these explorers had discovered the previously unknown valley and claimed it as their own. The unicorns claim that they have lived in the valley ever since.

"We've had a rough time of it since the day we got here," said one of the unicorns. "Our settlement was cut off from the rest of the world by a wall of jagged, impassable mountains, and on the other side of those mountains lay the kingdom of the yeti. We lived here in harmony with the yeti for many years, but then one day a group of yeti attacked our settlement and killed most of our people. Some of us escaped into the mountains, where we survived by living off the land. We haven't been able to communicate with the outside world for decades. We are very happy to be found."

The unicorns of legend have been known for their powers of healing and their intelligence. The scientific community is divided as to whether these particular unicorns have retained their magical powers. Some scientists are skeptical. "I think these unicorns are just regular horses with exceptionally well-groomed hair," said one scientist.

The unicorns plan to remain in the valley, living a quiet existence away from the rest of the world. Scientists will continue to study them in the hopes of unlocking the mysteries of their unique appearance and behavior.

For a week or two after Wendy came it was doubtful whether they would be able to keep her, as she was another mouth to feed. Mr. Darling was frightfully proud of her, but he was very honourable, and he sat on the edge of Mrs. Darling's bed, holding her hand and calculating expenses, while she looked at him imploringly. She wanted to risk it, come what might, but that was not his way; his way was with a pencil and a piece of paper, and if she confused him with suggestions he had to begin at the beginning again. "Now don't interrupt," he would beg of her. "I have one pound seventeen here, and two and six at the office; I can cut off my coffee at the office, say ten shillings, making two nine and six, with your eighteen and three makes three nine seven, with five naught naught in my cheque-book makes eight nine seven—who is that moving?—eight nine seven, dot and carry seven—don't speak, my own—and the pound you lent to that man who came to the door—quiet, child—dot and carry child—there, you've done it!—did I say nine nine seven? yes, I said nine nine seven; the question is, can we try it for a year on nine nine seven?" "Of course we can, George," she cried. But she was prejudiced in Wendy's favour, and he was really the grander character of the two. "Remember mumps," he warned her almost threateningly, and off he went again. "Mumps one pound, that is what I have put down, but I daresay it will be more like thirty shillings—don't speak—measles one five, German measles half a guinea, makes two fifteen six—don't waggle your finger—whooping-cough, say fifteen shillings"—and so on it went, and it added up differently each time; but at last Wendy just got through, with mumps reduced to twelve six, and the two kinds of measles treated as one. There was the same excitement over John, and Michael had even a narrower squeak; but both were kept, and soon, you might have seen the three of them going in a row to Miss Fulsom's Kindergarten school, accompanied by their nurse. Mrs. Darling loved to have everything just so, and Mr. Darling had a passion for being exactly like his neighbours; so, of course, they had a nurse. As they were poor, owing to the amount of milk the children drank, this nurse was a prim Newfoundland dog, called Nana, who had belonged to no one in particular until the Darlings engaged her. She had always thought children important, however, and the Darlings had become acquainted with her in Kensington Gardens, where she spent most of her spare time peeping into perambulators, and was much hated by careless nursemaids, whom she followed to their homes and complained of to their mistresses. She proved to be quite a treasure of a nurse. How thorough she was at bath-time, and up at any moment of the night if one of her charges made the slightest cry. Of course her kennel was in the nursery. She had a genius for knowing when a cough is a thing to have no patience with and when it needs stocking around your throat. She believed to her last day in old-fashioned remedies like rhubarb leaf, and made sounds of contempt over all this new-fangled talk about germs, and so on. It was a lesson in propriety to see her escorting the children to school, walking sedately by their side when they were well behaved, and butting them back into line if they strayed. On John's footer days she never once forgot his sweater, and she usually carried an umbrella in her mouth in case of rain. There is a room in the basement of Miss Fulsom's school where the nurses wait. They sat on forms, while Nana lay on the floor, but that was the only difference. They affected to ignore her as of an inferior social status to themselves, and she despised their light talk. She resented visits to the nursery from Mrs. Darling's friends, but if they did come she first whipped off Michael's pinafore and put him into the one with blue braiding, and smoothed out Wendy and made a dash at John's hair. No nursery could possibly have been conducted more correctly, and Mr. Darling knew it, yet he sometimes wondered uneasily whether the neighbours talked. He had his position in the city to consider. Nana also troubled him in another way. He had sometimes a feeling that she did not admire him. "I know she admires you tremendously, George," Mrs. Darling would assure him, and then she would sign to the children to be specially nice to father. Lovely dances followed, in which the only other servant, Liza, was sometimes allowed to join. Such a midget she looked in her long skirt and maid's cap, though she had sworn, when engaged, that she would never see ten again. The gaiety of those romps! And gayest of all was Mrs. Darling, who would pirouette so wildly that all you could see of her was the kiss, and then if you had dashed at her you might have got it. There never was a simpler happier family until the coming of Peter Pan. Mrs. Darling first heard of Peter when she was tidying up her children's minds. It is the nightly custom of every good mother after her children are asleep to rummage in their minds and put things straight for next morning, repacking into their proper places the many articles that have wandered during the day. If you could keep awake (but of course you can't) you would see your own mother doing this, and you would find it very interesting to watch her. It is quite like tidying up drawers. You would see her on her knees, I expect, lingering humorously over some of your contents, wondering where on earth you had picked this thing up, making discoveries sweet and not so sweet, pressing this to her cheek as if it were as nice as a kitten, and hurriedly stowing that out of sight. When you wake in the morning, the naughtiness and evil passions with which you went to bed have been folded up small and placed at the bottom of your mind and on the top, beautifully aired, are spread out your prettier thoughts, ready for you to put on. I don't know whether you have ever seen a map of a person's mind. Doctors sometimes draw maps of other parts of you, and your own map can become intensely interesting, but catch them trying to draw a map of a child's mind, which is not only confused, but keeps going round all the time. There are zigzag lines on it, just like your temperature on a card, and these are probably roads in the island, for the Neverland is always more or less an island, with astonishing splashes of colour here and there, and coral reefs and rakish-looking craft in the offing, and savages and lonely lairs, and gnomes who are mostly tailors, and caves through which a river runs, and princes with six elder brothers, and a hut fast going to decay, and one very small old lady with a hooked nose. It would be an easy map if that were all, but there is also first day at school, religion, fathers, the round pond, needle-work, murders, hangings, verbs that take the dative, chocolate pudding day, getting into braces, say ninety-nine, three-pence for pulling out your tooth yourself, and so on, and either these are part of the island or they are another map showing through, and it is all rather confusing, especially as nothing will stand still.

For a week or two after Wendy came it was doubtful whether they would be able to keep her, as she was another mouth to feed. Mr. Darling was frightfully proud of her, but he was very honourable, and he sat on the edge of Mrs. Darling's bed, holding her hand and calculating expenses, while she looked at him imploringly. She wanted to risk it, come what might, but that was not his way; his way was with a pencil and a piece of paper, and if she confused him with suggestions he had to begin at the beginning again. "Now don't interrupt," he would beg of her. "I have one pound seventeen here, and two and six at the office; I can cut off my coffee at the office, say ten shillings, making two nine and six, with your eighteen and three makes three nine seven, with five naught naught in my cheque-book makes eight nine seven—who is that moving?—eight nine seven, dot and carry seven—don't speak, my own—and the pound you lent to that man who came to the door—quiet, child—dot and carry child—there, you've done it!—did I say nine nine seven? yes, I said nine nine seven; the question is, can we try it for a year on nine nine seven?" "Of course we can, George," she cried. But she was prejudiced in Wendy's favour, and he was really the grander character of the two. "Remember mumps," he warned her almost threateningly, and off he went again. "Mumps one pound, that is what I have put down, but I daresay it will be more like thirty shillings—don't speak—measles one five, German measles half a guinea, makes two fifteen six—don't waggle your finger—whooping-cough, say fifteen shillings"—and so on it went, and it added up differently each time; but at last Wendy just got through, with mumps reduced to twelve six, and the two kinds of measles treated as one. There was the same excitement over John, and Michael had even a narrower squeak; but both were kept, and soon, you might have seen the three of them going in a row to Miss Fulsom's Kindergarten school, accompanied by their nurse. Mrs. Darling loved to have everything just so, and Mr. Darling had a passion for being exactly like his neighbours; so, of course, they had a nurse. As they were poor, owing to the amount of milk the children drank, this nurse was a prim Newfoundland dog, called Nana, who had belonged to no one in particular until the Darlings engaged her. She had always thought children important, however, and the Darlings had become acquainted with her in Kensington Gardens, where she spent most of her spare time peeping into perambulators, and was much hated by careless nursemaids, whom she followed to their homes and complained of to their mistresses. She proved to be quite a treasure of a nurse. How thorough she was at bath-time, and up at any moment of the night if one of her charges made the slightest cry. Of course her kennel was in the nursery. She had a genius for knowing when a cough is a thing to have no patience with and when it needs stocking around your throat. She believed to her last day in old-fashioned remedies like rhubarb leaf, and made sounds of contempt over all this new-fangled talk about germs, and so on. It was a lesson in propriety to see her escorting the children to school, walking sedately by their side when they were well behaved, and butting them back into line if they strayed. On John's footer days she never once forgot his sweater, and she usually carried an umbrella in her mouth in case of rain. There is a room in the basement of Miss Fulsom's school where the nurses wait. They sat on forms, while Nana lay on the floor, but that was the only difference. For a week or two after Wendy came it was doubtful whether they would be able to keep her, as she was another mouth to feed. Mr. Darling was frightfully proud of her, but he was very honourable, and he sat on the edge of Mrs. Darling's bed, holding her hand and calculating expenses, while she looked at him imploringly. She wanted to risk it, come what might, but that was not his way; his way was with a pencil and a piece of paper, and if she confused him with suggestions he had to begin at the beginning again. "Now don't interrupt," he would beg of her. "I have one pound seventeen here, and two and six at the office; I can cut off my coffee at the office, say ten shillings, making two nine and six, with your eighteen and three makes three nine seven, with five naught naught in my cheque-book makes eight nine seven—who is that moving?—eight nine seven, dot and carry seven—don't speak, my own—and the pound you lent to that man who came to the door—quiet, child—dot and carry child—there, you've done it!—did I say nine nine seven? yes, I said nine nine seven; the question is, can we try it for a year on nine nine seven?" "Of course we can, George," she cried. But she was prejudiced in Wendy's favour, and he was really the grander character of the two. "Remember mumps," he warned her almost threateningly, and off he went again. "Mumps one pound, that is what I have put down, but I daresay it will be more like thirty shillings—don't speak—measles one five, German measles half a guinea, makes two fifteen six—don't waggle your finger—whooping-cough, say fifteen shillings"—and so on it went, and it added up differently each time; but at last Wendy just got through, with mumps reduced to twelve six, and the two kinds of measles treated as one. There was the same excitement over John, and Michael had even a narrower squeak; but both were kept, and soon, you might have seen the three of them going in a row to Miss Fulsom's Kindergarten school, accompanied by their nurse. Mrs. Darling loved to have everything just so, and Mr. Darling had a passion for being exactly like his neighbours; so, of course, they had a nurse. As they were poor, owing to the amount of milk the children drank, this nurse was a prim Newfoundland dog, called Nana, who had belonged to no one in particular until the Darlings engaged her. She had always thought children important, however, and the Darlings had become acquainted with her in Kensington Gardens, where she spent most of her spare time peeping into perambulators, and was much hated by careless nursemaids, whom she followed to their homes and complained of to their mistresses. She proved to be quite a treasure of a nurse. How thorough she was at bath-time, and up at any moment of the night if one of her charges made the slightest cry. Of course her kennel was in the nursery. She had a genius for knowing when a cough is a thing to have no patience with and when it needs stocking around your throat. She believed to her last day in old-fashioned remedies like rhubarb leaf, and made sounds of contempt over all this new-fangled talk about germs, and so on. It was a lesson in propriety to see her escorting the children to school, walking sedately by their side when they were well behaved, and butting them back into line if they strayed. On John's footer days she never once forgot his sweater, and she usually carried an umbrella in her mouth in case of rain. There is a room in the basement of Miss Fulsom's school where the nurses wait. They sat on forms, while Nana lay on the floor, but that was the only difference. They affected to ignore her as of an inferior social status to themselves, and she despised their light talk. She resented visits to the nursery from Mrs. Darling's friends, but if they did come she first whipped off Michael's pinafore and put him into the one with blue braiding, and smoothed out Wendy and made a dash at John's hair. No nursery could possibly have been conducted more correctly, and Mr. Darling knew it, yet he sometimes wondered uneasily whether the neighbours talked. He had his position in the city to consider. Nana also troubled him in another way. He had sometimes a feeling that she did not admire him. "I know she admires you tremendously, George," Mrs. Darling would assure him, and then she would sign to the children to be specially nice to father. Lovely dances followed, in which the only other servant, Liza, was sometimes allowed to join. Such a midget she looked in her long skirt and maid's cap, though she had sworn, when engaged, that she would never see ten again. The gaiety of those romps! And gayest of all was Mrs. Darling, who would pirouette so wildly that all you could see of her was the kiss, and then if you had dashed at her you might have got it. There never was a simpler happier family until the coming of Peter Pan. Mrs. Darling first heard of Peter when she was tidying up her children's minds. It is the nightly custom of every good mother after her children are asleep to rummage in their minds and put things straight for next morning, repacking into their proper places the many articles that have wandered during the day. If you could keep awake (but of course you can't) you would see your own mother doing this, and you would find it very interesting to watch her. It is quite like tidying up drawers. You would see her on her knees, I expect, lingering humorously over some of your contents, wondering where on earth you had picked this thing up, making discoveries sweet and not so sweet, pressing this to her cheek as if it were as nice as a kitten, and hurriedly stowing that out of sight. When you wake in the morning, the naughtiness and evil passions with which you went to bed have been folded up small and placed at the bottom of your mind and on the top, beautifully aired, are spread out your prettier thoughts, ready for you to put on. I don't know whether you have ever seen a map of a person's mind. Doctors sometimes draw maps of other parts of you, and your own map can become intensely interesting, but catch them trying to draw a map of a child's mind, which is not only confused, but keeps going round all the time. There are zigzag lines on it, just like your temperature on a card, and these are probably roads in the island, for the Neverland is always more or less an island, with astonishing splashes of colour here and there, and coral reefs and rakish-looking craft in the offing, and savages and lonely lairs, and gnomes who are mostly tailors, and caves through which a river runs, and princes with six elder brothers, and a hut fast going to decay, and one very small old lady with a hooked nose. It would be an easy map if that were all, but there is also first day at school, religion, fathers, the round pond, needle-work, murders, hangings, verbs that take the dative, chocolate pudding day, getting into braces, say ninety-nine, three-pence for pulling out your tooth yourself, and so on, and either these are part of the island or they are another map showing through, and it is all rather confusing, especially as nothing will stand still.

Suffix Identification

Given a **prefix**, does the language model prefer the **gold suffix** over a random suffix from same book?

- Negatives often have high likelihood in isolation (common words etc.)
- LMs ignore prefix (longer-term context) in favor of local context

search (Su et al., 2022)	5.3	21.2	54.0	43.2
decode (Li et al., 2022)	65.2	83.2	73.2	84.9
RANKGEN-all-XL (ours)				
rerank full ancestral	79.0	84.9	79.0	86.4
beam search nucleus	76.2	88.9	77.0	89.4

What do humans evaluators think about RankGen?

English writers: RankGen > nucleus sampling
75% times

Reasons relating the prefix with the generation (81%)

More topically relevant to the prefix	37.7%
Better continuity / flow / chronology	31.6%
Does not contradict prefix	6.8%
Stylistically closer to prefix	4.7%

Reasons related only to the generated text (19%)

Better commonsense understanding	8.0%
Less repetitive	4.7%
More grammatical	3.1%
Less contradictions	1.7%
More coherent / other	1.7%

Very easy to use RankGen!

Install

```
pip install rankgen
```

Encode

```
from rankgen import RankGenEncoder, RankGenGenerator

rankgen_encoder = RankGenEncoder("kalpeshk2011/rankgen-t5-xl-all")

prefix_vectors = rankgen_encoder.encode(["This is a prefix sentence."], vectors_type="prefix")
suffix_vectors = rankgen_encoder.encode(["This is a suffix sentence."], vectors_type="suffix")
```

Generate

```
generator = RankGenGenerator(rankgen_encoder=rankgen_encoder, language_model="gpt2-medium")
inputs = ["Whatever might be the nature of the tragedy it would be over with long before this, and"]

print(generator.overgenerate_rerank(inputs, top_p=0.9, num_samples=10)[0][0])
print(generator.beam_search(inputs, top_p=0.9, num_samples=10, beam_size=2)[0][0])
```
